FUNCTION: Thiol protease which is believed to participate in intracellular degradation and turnover of proteins. Its proteolytic activity is a major factor in both periodontal tissue destruction and in bacterial host defense mechanisms. Activates
                                                                                                                                                     complement C3 and C5. ATMAINT: Cleavage of proteins, including collagens and immunoglobulins, with a preference for Arg in P1, and hydrophobic residues in P2 and P3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      158 LPAGTKYVAFRHFGCTDFFWINL-DEVEIKANGKRADFTETFESSTHGEAPAEWTTIDAD

28-FEB-2003 (Rel. 41, Last annotation update)
Bifunctional autolyship precursor [Includes: N-acetylmuramoyl-L-alanine amidase (EC 3.5.1.28); Mamnosyl-glycoprotein endo-beta-N-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: ENDOHYDROLYSIS OF THE DI-N-ACETYLCHITOBLOSYL UNIT IN HIGH-MANNOSS GLYCODEPTIDES AND GLYCOPROTEINS CONTAINING THE -[(MAN) 5 (GLORAC) 2] -ASN STRUCTURE. ONE N-ACETYL-D-GLUCOSAMINE RESIDUE REMAINS ATTACHED TO THE PROTEIN; THE REST OF THE CATELOSTOPHRIDE IS RELEASED INTACT.

CATALYTIC ACTIVITY: Hydrolyzes the link between N-acetylmuramoyl residues and L-amino acid residues in certain bacterial cell-wall
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CATALYTIC ACTIVITY: Endohydrolysis of the di-N-acetylchitobiosyl curist in high-mannose glycopeptides and glycopteins containing the -[Man(GlcNAc)2]Asn-structure. One N-acetyl-D-glucosamine residue remains attached to the protein; the rest of the oligosaccharide is released intact.
SINGELLULAR LOCATION: Secreted.
FIM: UNDERGOES PROTECLYIIC PROCESSING TO GENERATE THE TWO EXTRACELLULAR LOYLE ENZYMES.
SINILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE N-ACETYLMORAMONI-1-ALAURIB ANIDASE FAMILY 2.
SIMILARITY: IN THE C-TERMINAL SECTION; BELONGS TO FAMILY 73 OF
                                                                                                                                                                                                                                                                                                                                                                                             "A Staphylococcus aureus autolysin that has an N-acetylmuramoyl-L-alanine amidase domain and an endo-beta-N-acetylglucosaminidase domain: cloning, sequence analysis, and characterization."; Proc. Natl. Acad. Sci. U.S.A. 92:285-289(1995).

                                                                                    CenE, a member of a new family of beta-1,4 glucanases."

Biochem. Biophys. Res. Commun. 199:1223-1228(1994).

-! FUNCTION: Hydrolyze cellohexaose to a mixture of cellotetraose, cellotriose and cellobiose, with only a trace of glucose. It hydrolyzed cellopentaose to cellotriose and cellobiose, and cellotetraose to cellobiose, but it did not hydrolyze cellotriose. Has also wake and cellobiose, but it did not hydrolyze cellotriose. Has also wake and cellobiose, but it did not hydrolyze cellotriose.

-!- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glucosidic linkages in cellulose and cellotetraose, releasing cellobiose from the non-reducing ends of the chains a fibronectin type III domains.

-!- SIMILARITY: Contains 1 bacterial-type cellulose-binding (CBD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               26 ASWKT---IDADGDGNNWTTTPPPGGTSFAGHNSAICVSSASYINFEGPQNPDNYLVTPE

Biochem. J. 319:705-712(1996):
--- FUNCTION: Involved in maceration and soft-rotting of plant tisk:
--- FUNCTION: Involved in maceration and soft-rotting of plant tisk:
--- CATALYTIC ACTIVITY: Pectin + N H(2)0 = N methanol + pectate.
--- SIMILARITY: Belongs to the pectinesterase family.
                                                                                                                                                                                            Eukaryota; Fungi; Ascomycota; Pezizomycotina; Eurotiomycetes;
Eurotiales; Trichocomaceae; mitosporic Trichocomaceae; Aspergillus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GTRAIN-S6;
GOM M.S., Geary S.J.;
Submitted (FEB-1986) to the EMBL/GenBank/DDBJ databases.
-!-FUNCTION: Could be involved in cytadherence.
-!-STMCTION: Could be involved in membrane protein (Probable).
-!-SIMILARITY: Belongs to the adhesin Pl family.
-!-CAUTION: Ref. 4 sequence differs from that shown due to a frameshift in position 159 to 213.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
